REDSTOP

PIGMENTS FOR PERMANENT MAKEUP

■ MONODOSE 0,7 ml

■ 5 ml

SAFETY **FIRST !**

The new line of BioEvolution QLINE PRO colours ensures high durability of makeup, ease of implementation, durability of the pigment in the skin and safety. BioEvolution colours are safe for health and non-allergenic. They are produced in compliance with the European Union REACH commission regulation on the content of heavy metals and other contaminants.

- suitable consistency, facilitating the introduction of pigments into the skin,
- long-lasting and colour-fast
- components of pharmaceutical quality compliant with the EU Cosmetics Directive

MONODOSE 0,7 ml is sufficient for one complete treatment. MONODOSE packaging provides the highest level of safety, each treatment is performed with sterile colour.

■ 5 ml

AFTERCARE acts as a dressing. It stops the bleeding and prevents the colour removal. This better keeps the pigment in the skin. The use of BioEvolution AFTERCARE definitely has a better pigmentation effect.

Apply it to your skin surface, lightly tapping, immediately after pigmentation. Leave BioEvolution AFTERCARE on your skin for 10 hours after the treatment. No ointments or creams are recommended until full healing.
